

## Groupware Integration

**Jeeves Groupware Integration is designed for project-oriented companies and organisations where advanced calendar functionality is an important asset.**

When project and time planning is handled by separate systems, manual transferral of information is required and often extensive verification work too.

Instead with the help of Jeeves Groupware Integration, everything which is registered in Outlook, can be registered, costed and invoiced within Jeeves Enterprise. Any information can be transferred between both systems, even to own-defined fields in the business system.

Since all planned project activities within Jeeves Enterprise are automatically transferred over to Outlook, much time is saved and the risk of planning errors is reduced. Each user has access to just their own personal activities.

<b>Replication of company data between Jeeves Enterprise and Exchange:</b>	Maintenance of the register need only happen in one environment, which means a more consistent company register. This saves a lot of time and also means a correct basis for decision making.
<b>Replication of planned events from Jeeves Enterprise to Exchange:</b>	Since planned events within Jeeves Enterprise are shown within Outlook, one gets the benefit of Outlook's advanced calendar and alarm functionality. In this way it's easier to plan and get an overview of one's time.
<b>Replication of activities within Exchange to planned events within Jeeves Enterprise:</b>	Activities which are added in Outlook can be registered and invoiced within Jeeves Enterprise.
<b>Replication of any fields from Jeeves Enterprise to Exchange:</b>	Information from Jeeves Enterprise can be shown within Outlook contacts.
<b>Access to Outlook's export functionality:</b>	Contacts and planned events can be replicated between Jeeves Enterprise and hand computers. This means constant access to the right information and the right basis for decision making.
