

Jeeves Business Control, JBC is a system for financial planning, budgeting, forecasting and analysis for decentralised organisations where every business unit manager is responsible for their own profit centre. The system is tailored to the user's own business and requirements which heightens financial awareness and responsibility and hence gives better results at all levels.

Jeeves Business Control provides complete functionality. Automatic consolidation guarantees consistent data at all levels and the drill-down function easily provides both an overview and detailed knowledge. Also included is spontaneous graphical analysis and integrations with Excel, Word and E-mail. Compared with various Excel tools, Jeeves Business Control is a unified system for the entire organisation with common conditions and terms which are centrally defined. This means that compilations and consolidations are always worthwhile.

Jeeves Business Control is internet-based and geographically independent. The system can be installed quickly and is easy to understand and use.

Easy to use:	Line-of-business users can easily use the system. This leads to increased financial awareness, and hence profitability.
Business-focused:	Since the system matches the business unit manager's issues and concerns, it's considered to be relevant and useful to end users.
Common conditions, reports, forms, dimensions etc:	Everyone works with the same conditions, a common system, where information is always consolidated correctly.
Spontaneous "drill-down"-analyses:	Quick and easy to find relevant information using various financial analyses.
Graphical analysis:	Provides increased insight and communication possibilities, via approved data being presented graphically by simply selecting and clicking.
Automatic consolidation:	Since data is always consistent, no mistakes of the kind "forgot to consolidate" can occur.
Dynamic reporting:	Provides correctly presented information to the correct person since reports are continually customized and updated for both the company and each separate business unit.

Internet-based:	Geographically-separated business units can be handled without problem. One can work from home or when travelling.
Encryption and Secure Login:	The system is secure. Unauthorized access is not possible.
Cached-databases on the client side:	Increases efficiency since one can process data even with a slow Internet connection.
Integration to e-mail, Word and Excel:	Easy to export and import reports and forms to Excel, send as an e-mail or present in Word. Provides quick and easy presentation and communication possibilities.
